## WHY PRINTING WITH PLASTISOL INKS

- Because they are versatile; they can be printed on substrates that resist a temperature of 160°C
- Because they are very stable in the screen and they do not dry at room temperature
- Because they allow high runs, without stopping the machines to clean the screens

# PLASTISOL INKS FEATURES

Plastisol inks can be printed on all kinds of fabrics and fibers which are able to resist polymerization temperatures: 160°C for 3 minutes
