

Applications

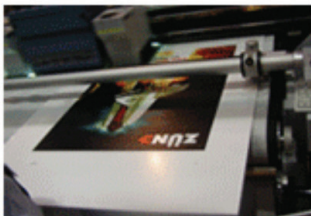

Photo mounting

All ARTFOAM boards are good for photo mounting. Our adhesive quality is, however, highly recommended for its high performance and competitive cost. ARTFOAM air-free adhesive is a good choice for non-expert end-users who do not have laminating equipments. ARTFOAM black is also our best seller for photo, poster and picture mounting applications. ARTFOAM flat is recommended for heavy-duty mounting and for medium term applications.

Making POP/POS signs, exhibit signages, and graphic displays

ARTFOAM standard and adhesive foam boards are good for making point of purchase (POP/POS) signs and graphic displays. Die-cuttable, silk-screen and UV curable digital-printable.

Direct printing (UV-flatbed digital printing and silk-screen printing)

ARTFOAM flat is an excellent substrate material for direct digital or silk-screen printing applications because of its plastic coat face with primer finish on both sides. ARTFOAM standard is a cost-effective solution.

Making creative decorations and picture frames

ARTFOAM standard is good for making creative decorations and 3-dimensional models. ARTFOAM standard, adhesive and kraft foam boards are also good as backing boards for picture framing.
