

be.tex® Flash Light FR

Art.No. 4390-XXXX-26-BE

Description

Be „flashed“ by this flashlight textile. The combination of fine knit structure, light diffusion on the back and colour boost coating on the print side make it possible. You get enormous edge sharpness and very deep black in direct sublimation printing. Thanks to its light stretch, be.tex® Flash Light FR is easy to clamp and fits perfectly. Thoroughly treated, the printed textile can be carefully folded. Important: Run a print test! Many factors influence the textile during printing and application. All technical data were determined according to the current state of measurement technology and reflect the values of the measurement sample. Despite the highest quality standards, there may be production deviations – all information are legally non-binding and without guarantee.

Main Application

Lightbox

Applications

Banner

Light boxes

Projections (front/back)

Stand Construction

Features

Crease resistant

Light diffusion coating

No fraying

Facts
